

Rover Technology Fusions Announces New Release of INK2Docs

(Tampa, FL – February 20, 2010) – Rover Technology Fusions, a Tampa based mobile-data capture, workflow and document management solutions provider, announced a new release of the product, INK2Docs. The new release adds powerful features that clearly simplify a customer’s document management. When deploying INK2Docs, customers can now be confident they have eliminated ALL episodes of lost documents in their document management system.

“This is workflow simplicity at its best! Any document that can be printed from a Windows workstation can now be fully empowered utilizing a digital pen and Rover’s INK2Docs management system. The functionality also makes documents instantly available in digital format,” explained Robert Letzeisen, Executive VP & CTO of Rover Technology Fusions.

INK2Docs software requires minimal training to quickly become productive. In less than an hour, customers can automatically protect their files, have them available online for sharing, and deliver them anywhere in the world, even directly from the field with only the digital pen and a smart phone or Blackberry.

“Important communication features, easily deployed integration connectors, including Microsoft SharePoint, and a robust workflow engine are just some of the highlights of the new release,” said Mr. Letzeisen at a recent training seminar. “The INK2Docs price point delivers investment return typically within the first six months of the product use. This is extremely important in challenging economic times when CFOs need to see break-even within the first twelve months of a technology investment. Being able to offer security minded customers the potential to eliminate lost paperwork, courier costs, scanning and expedite the data entry function is absolutely critical especially when it directly drives the billing process” he continued.

Rover INK2Docs quickly delivers information control and enhanced compliance, while improving customer service, all while driving down operational business expenses and increasing profits.

About Rover Technology Fusions

Tampa, Florida based Rover Technology Fusions (Rover) is a leading full-service technology solutions provider offering a robust portfolio of workflow and mobile-data products to a broad range of customers.
