

Rover Technology Fusions Announces New Rover INK Server Platform

(Tampa, FL – April 1, 2010) – Rover Technology Fusions, a Tampa based mobile-data capture, workflow and document management solutions provider, announced a new release of their Rover INK Server Product suite today. In the fourth year of Rover INK Enterprise Server development, the new release incorporates all of the features of the previous release and incorporates the integration of the new Rover INK Client platform expected out next month.

“Rover’s new server release is a direct response to customer requests surveyed over the previous year. If you want to develop state of the art software solutions the best source of input is, and will always be, users of your products” said Robert Letzeisen, Executive VP of Rover Technology Fusions. “Having the talent to architect and develop high quality software is only one piece of the success equation. The key is listening to your customers and being able to effectively communicate what the market demands from the product set to delivering the same,” he further stated.

“Rover INK products already clearly reduce the use and dependency of paper, photocopies, faxing and overnight delivery services, now it was time to enhance the usability model, and add features that address customers’ specific mobile workflows and best practices without the need for heavy customization” stated Bryan Kearney, President and CEO of the Company. “By empowering the customer to define their own internal workflows with a simple to use Inbox - Outbox concept, I believe we continue to deliver on the promises of investment protection and leverage. Our new Server suite is the first step toward total customer independence from costly vendor customizations,” he went on to say.

The Company plans a new client release at the beginning of Q3 2010 which will bring to market a revolutionary new approach to mobile forms processing. While focus remains on the digital pen and Tablet PC for input devices, the Rover architected workflow software requires little to no user training or lengthy IT project. The Rover INK product suite typically demonstrates a significant cost reduction in operations while enhancing customer service, safety, and compliance initiatives with an investment return within the first twelve months of implementation. New security enhancements are also planned for the Q3 release of the new Rover INK client software and mobility suite of Bluetooth connectivity.

About Rover Technology Fusions

Tampa, Florida based Rover Technology Fusions (Rover) is a leading full-service technology solutions provider offering a robust portfolio of workflow and mobile-data products to a broad range of customers. Focused on improving operational efficiency through the use of digital writing technology, Rover INK delivers ‘speed on the edge’ of the enterprise resulting in the elimination of costs associated with forms processing.
